

# **BIRTH DEFECTS CLUSTER INVESTIGATIONS**

## **What was the problem/situation?**

The LA Birth Defects Monitoring Network Program (LBDMN) lacks sufficient resources to investigate birth defect clusters.

## **How was Tracking involved?**

LEPHT is assisting LBDMN by supplying the funds and GIS services necessary for getting LBDMN's data digitalized and mapped.

## **Improved Public Health**

This enabled LBDMN to identify at risk populations. The information gathered was included in LA's first report based on state birth defect data.
